## Answer review

Q1 Single correct Correct 1 / 1

What is meant by the time value of money?

A Money received today has the same value as money received later

B Money available today is generally worth more than the same amount received in the future

Your answer Correct answer

C Money loses all value after one year

D The value of money depends only on electricity consumption

Q2 Single correct Correct 1 / 1

What is the present value of Rs. 1100 received after one year at a discount rate of 10%?

A Rs. 900

B Rs. 1000

Your answer Correct answer

C Rs. 1100

D Rs. 1210

Q3 Single correct Correct 1 / 1

A PV plant requires Rs. 80000 for construction today. How is this initial construction cost shown in a cash flow diagram?

A As a cash inflow at year 0

B As a cash outflow at year 0
Your answer Correct answer

C As salvage value in year 0

D As annual electricity savings

Q4 Single correct Correct 1 / 1

What is the salvage value of a solar PV plant?

A The annual electricity bill

B The estimated remaining or resale value of the plant at the end of its useful life
Your answer Correct answer

C The initial installation cost

D The annual energy generation

Q5 Single correct Correct 1 / 1

A PV plant is sold for Rs. 10000 at the end of its useful life. What is its salvage value?

A Rs. 0

B Rs. 5000

C Rs. 10000
Your answer Correct answer

D Rs. 20000

Q6 Single correct Correct 1 / 1

An investment of Rs. 10000 today is converted to its future value after one year at 10% annual interest. What is the future value?

A Rs. 9000

B Rs. 10000

C Rs. 11000
Your answer Correct answer

D Rs. 12000

Q7 Single correct Correct 1 / 1

For profit-cost analysis at a common future date, what should be done with cash flows occurring today?

A Convert them to future values using a suitable interest rate
Your answer Correct answer

B Ignore all initial costs

C Subtract salvage value from annual generation

D Divide all costs by PV module area

Q8 Single correct Correct 1 / 1

A PV plant provides a cash benefit of Rs. 12100 at the end of year 2. At a 10% annual discount rate, what is its present value?

A Rs. 9000

B Rs. 10000
Your answer Correct answer

C Rs. 11000

D Rs. 12100

Q9 Single correct Correct 1 / 1

A PV project has present-value benefits of Rs. 90000 and present-value costs of Rs. 70000. What is the net present value?

A Rs. -20000

B Rs. 20000
Your answer Correct answer

C Rs. 70000

D Rs. 160000

Q10 Single correct Correct 1 / 1

A PV system has a total lifetime cost of Rs. 120000 and generates 30000 kWh over its lifetime. What is the average unit cost of electricity?

A Rs. 2 per kWh

B Rs. 3 per kWh

C Rs. 4 per kWh

Your answer Correct answer

D Rs. 6 per kWh
